

The background features a futuristic digital landscape with glowing blue lines and binary code (0s and 1s) floating in a dark blue space. The lines curve and flow, creating a sense of movement and data processing. The overall aesthetic is high-tech and digital.

# AI Center Bavaria

Potentials for Industry and Administration

## Reliable AI software systems

We conduct research into reliable and safe AI methods for managing and controlling enterprise-critical processes and systems.

We place a high value on reliable, safe and self-learning software systems capable of making timely, validated decisions in unstable environments or in unpredictable situations. This includes embedded decisions and control systems such as software for autonomous, interactive vehicle fleets, autonomous service drones and air taxis, cloud-controlled production systems, energy and utility infrastructures, as well as new digital services for public administration organizations.

Through design thinking, hackathons and prototyping, we promote the systematic development of AI's potential in Bavaria.

We furthermore bolster project cooperation between industry and science with the aim of developing practical products.

**fortiss** is the research institute of the Free State of Bavaria for software-intensive systems and services with headquarters in Munich. The scientists collaborate on research, development and transfer projects with universities and technology companies in Bavaria, Germany and Europe.
